# 2021 Predictions

Global Supply Chain

A cyber-attack in 2021 could cripple our global supply chain, especially as many organizations turn to automation to limit or remove the human element from the process.
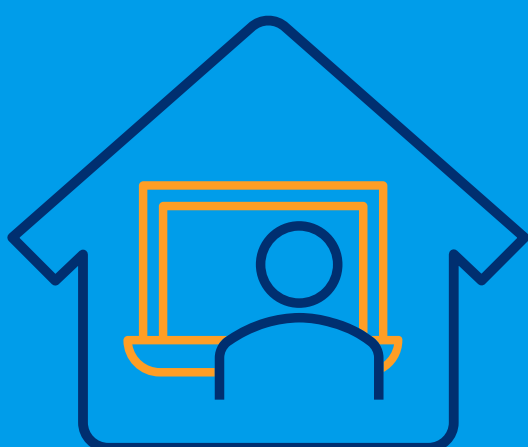

Connected Device Vulnerabilities

Where 2020 saw the revelation of the weakness of these underlying TCP/IP stack components with disclosures like AMNESIA:33 and Ripple20, 2021 is the year these vulnerabilities will be exploited.

5G

This 5G adoption is one of the many steps that will propel us into the next generation of networking, with technologies replacing LAN, WAN and becoming the new version of Wi-Fi.

New Remote Work World

In 2021, one of these home devices will be used by attackers to access the corporate network, causing meaningful damage to an organization.
